Offline Mode (no internet)	✓	✓	Partial	✗	✗
Profit/Loss per Product	✓	Partial	✗	✓	Partial
Local pricing (no USD trap)	✓	✗	✗	✗	✗

FEATURE 01

Smart Checkout & Payment Engine

A trained cashier completes a transaction in under 15 seconds. Every common payment scenario is covered natively — no plugins required.

Fast Product Search

Scan any barcode or type a product name. Products appear instantly with image, price, and stock level.

Multiple Payment Methods

Cash, Card, Bank Transfer, Pay Later, Cash on Delivery — all built in. No third-party payment app needed.

Split Payment

Divide a single sale across any combination of methods. Example: \$30 cash + \$20 card + \$10 credit — all in one transaction.

Hold & Resume

Park a sale mid-process. Serve the next customer immediately. Resume the held sale when the first customer returns.

Returns & Refunds

Process partial or full returns on any past sale. Stock is automatically restocked. Refund amount is tracked per item.

Receipt Printing

Formatted thermal receipt with store logo, itemized VAT, discount breakdown, cashier name, and custom footer message.

Full Checkout Capability List

- | | |
|----------------------------------|-------------------------------------|
| ✓ Barcode scan to add product | ✓ Product image thumbnails in grid |
| ✓ Category tile browser | ✓ Product variants (size, color) |
| ✓ Per-item discount | ✓ Order-level discount (% or fixed) |
| ✓ Promo code redemption | ✓ Customer account attachment |
| ✓ Order notes field | ✓ Void sale (manager PIN required) |
| ✓ Digital receipt on screen | ✓ Print receipt (thermal format) |
| ✓ Offline mode (IndexedDB cache) | ✓ Auto-sync when internet returns |

Pay Later — Credit Accounts

When a customer cannot pay in full, the balance is saved against their account as a credit debt. The cashier can collect partial or full payments at any later time. Every payment is timestamped and logged. Outstanding balances appear on the dashboard for instant visibility.

Offline Mode

BCS uses a local IndexedDB cache in the browser. If the internet connection drops, the cashier continues selling without interruption. When connectivity returns, all offline transactions sync automatically to the cloud — nothing is lost.

FEATURE 02 & 03

Products & FIFO Batch Inventory

Complete product lifecycle management with automatic FIFO stock deduction — the system always sells the soonest-to-expire units first.

Product Fields

- ✓ Name, Barcode (auto-generated)
- ✓ Selling Price & Cost Price
- ✓ Category with emoji icon
- ✓ Product Image (upload or URL)
- ✓ Stock quantity tracking
- ✓ Expiry Date (auto-disables product)
- ✓ VAT Exempt toggle
- ✓ Online Store visibility toggle
- ✓ Product Variants (size, color...)

Batch Tracking Fields

- ✓ Auto-generated batch number
- ✓ Supplier link
- ✓ Received date
- ✓ Expiry date
- ✓ Cost price at time of purchase
- ✓ Initial & remaining quantity
- ✓ Batch status (Active / Expiring / Expired / Depleted)

FIFO Automatic Stock Deduction

When a product is sold, BCS automatically deducts stock from the **earliest-expiring batch first** (First In, First Out). Batches with no expiry date are consumed last. This prevents expired stock from sitting hidden while newer stock is sold.

Batch Status Dashboard

Status	Condition	Action Required
● Active	Has remaining quantity, not expired	None
● Expiring Soon	Will expire within 30 days	Consider running a promotion
● Expired	Past expiry date, still has stock	Remove from sale immediately
● Depleted	All units sold	Reorder if needed

Complete Stock Log

Every single stock movement is recorded with timestamp, user, and reason. Nothing is invisible.

Product Variants

One product SKU can have multiple sellable variants — each with its own price, stock level, and barcode. Example: *T-Shirt* → Small \$15 (qty:20), Medium \$15 (qty:35), Large \$17 (qty:10). The cashier selects the variant at checkout from a popup.

Low Stock Alerts

Products with 5 or fewer units remaining are flagged in red on the dashboard. The admin sees the product name and exact stock count at a glance — no need to dig through reports to spot stock problems.

FEATURES 04 · 05 · 06

Customers, Promotions & Cash Drawer Control

Customer CRM

Customer Profiles

Name, phone, email, address, notes. Auto-tracks total spent, total orders, and outstanding Pay Later balance. Full 50-order purchase history per customer.

Credit / Pay Later Ledger

Credit balances accumulate across multiple sales. The cashier collects partial or full payments at any time. Every payment is logged with timestamp and cashier name.

Discounts & Promo Codes

- ✓ **Fixed discount** — subtract a flat amount from the order (e.g. \$5 off)
- ✓ **Percentage discount** — apply % off the entire order or single item (e.g. 15% off)
- ✓ **Promo codes** — create codes with usage limits and expiry dates; applied automatically at checkout
- ✓ **Points offers** — configure points-per-dollar; customers accumulate and redeem points

Shift & Cash Drawer Management

Every cashier opens a shift before selling. Every sale is linked to that shift. At close, the system calculates exactly how much cash should be in the drawer — and flags any discrepancy.

Opening a Shift

Cashier counts the opening float using denomination entry (×\$1, ×\$5, ×\$10, ×\$20). System calculates total automatically. Shift opens with the float recorded.

During the Shift

All sales link to the open shift. Cash In/Out events (e.g., petty cash withdrawal) recorded with reason at any time.

Closing a Shift

Cashier counts closing cash with denomination breakdown. System calculates Expected Cash and shows the variance (over/short). Any discrepancy is immediately visible.

Shift Report

Full breakdown: Cash, Card, Bank Transfer, Pay Later, Delivery sales. Net revenue after refunds and discounts. Saved permanently for admin review.

Void PIN Protection

The store admin sets a manager PIN. Any sale void requires entering this PIN — preventing cashiers from quietly voiding sales without authorization. Every void is logged in the audit trail with reason and timestamp.

FEATURES 07 & 08

Reports & AI Business Intelligence

Complete financial visibility plus an AI engine that tells you what to promote and what to reorder — before problems happen.

Dashboard & Reports

Live Dashboard

Today/Week/Month/Year sales at a glance. Top 5 products. Low stock alerts. Pay Later outstanding balance. Sales chart by hour, day, or month.

Profit & Loss Report

Revenue, COGS, discounts, refunds, gross profit, gross margin %. Per-product breakdown with margin % per SKU. Filter by any date range.

Sales Report

Full transaction history. Search by customer, product, or sale ID. Filter by payment method or status. Every sale shows items, cashier, and timestamp.

Shift Reports

Every shift close auto-generates a report. Cash variance tracking. Payment method breakdown. Net revenue after all refunds and discounts.

AI Offer Suggestions

The AI engine analyzes your product sales velocity, batch expiry dates, and profit margins. It then generates specific, actionable promotional offers for products that risk expiring before they sell — protecting your margins automatically.

What AI Analyzes	What AI Generates
Average daily sales (last 60 days)	Offer type: discount %, bundle, buy X get Y
Days-to-expiry vs. days-to-sell ratio	Urgency level: High / Medium / Low
Current cost vs. selling price (margin)	Exact offer value (never goes below margin)
Total stock level & slow-movers	Expected impact (units to sell in X days)

AI Reorder Suggestions

The AI calculates how many days of stock remain for each product based on actual sales velocity. It generates a prioritized reorder list — **Urgent** (under 7 days left), **Normal** (7–20 days), **Low priority** (20–30 days) — with exact suggested quantities and estimated total cost.

Go to AI Insights

Navigate to AI Insights in the sidebar

2

Review Offer Suggestions

See which products need promotions — with urgency level and reasoning

3

Review Reorder List

AI shows what to order, quantity per product, and total estimated cost

4

Save as Purchase Order

Adjust quantities if needed, then save — track it from Pending → Approved → Ordered → Received

FEATURES 09 · 10 · 11

VAT, Online Store & Audit Security

Lebanese VAT Compliance — 11%

Lebanese tax law requires 11% VAT on most goods, but certain categories are exempt (basic food, medicines, books, agricultural products). BCS handles all of this automatically once configured.

Setup (one time):

- ✓ Set Tax Rate = 11% in Store Settings
- ✓ Enter your VAT Number (TIN)
- ✓ Mark exempt products with the VAT Exempt toggle

On every receipt:

- ✓ Subtotal (before VAT)
- ✓ VAT Amount (11% on non-exempt items)
- ✓ Final Total
- ✓ Your VAT Registration Number

| Online Store & Delivery Module

Activate in one click. BCS creates a public storefront for your store automatically. Customers order online — the cart injects itself into the cashier's POS screen when you accept the order.

Public Storefront

Auto-generated URL with your store slug. Product catalog with images, search, and category filter. Mobile-first responsive design.

Order Flow

Customer orders online → Admin approves → Cart auto-injects to cashier's POS → Cashier processes sale → Driver notified on Telegram.

Telegram Driver Alerts

When a delivery order ships, the driver receives a Telegram message: customer name, full address, items, total, and payment method.

Live Order Tracking

Customer sees real-time status updates: Pending → Accepted → Out for Delivery → Delivered. No phone calls needed.

| Security & Audit Log

Every action in BCS is permanently recorded. Nothing is invisible. The audit log captures:

Login/Logout

Every Sale

Returns & Voids

Stock Changes

Customer Edits

Price Changes

Settings Changes

Device Logins

Every log entry includes: timestamp, username, IP address, device, and the full details of what changed. Admins can review any action from any date.

GETTING STARTED

Live Demo Guide & Subscription Plans

| Demo 1 — Standard Checkout (2 min)

1 Open the POS screen

The checkout interface loads instantly — no loading delay

2 Scan or search products

Scan 3 barcodes or click category tiles to add items

3 Apply a discount

Tap Discount → enter 10% → watch total recalculate instantly

4 Split payment

Select Split → assign \$20 cash + \$15 card → checkout

5 Print receipt

Receipt shows store logo, VAT breakdown, cashier name, and footer message

| Demo 2 — AI Insights (2 min)

1 Go to AI Insights

Click AI Insights in the sidebar navigation

2 View Offer Suggestions

AI shows which products need promotions with urgency level and reasoning

3 View Reorder List

AI shows exact quantities to order and estimated total cost per supplier

4 Save Purchase Order

Adjust quantities → Save → track from Pending to Received

| Demo 3 — Delivery Order Flow (3 min)

1 Customer orders online

Browse storefront → add items → enter address → Cash on Delivery → place order

2 Admin receives notification

Online Orders page shows new order with items, address, and total

3 Accept order

Click Accept → cart automatically appears in cashier's POS screen

4 Driver notified

Telegram message sent to driver with full delivery details

Subscription Plans

Trial 14 days free → 2 users → 100 products → All features included	Basic Most popular → 5 users → 500 products → All features included	Pro Growing business → 20 users → 2,000 products → All features included	Enterprise No limits → 100 users → Unlimited products → Priority support
